

Rufus Hsu

R&D at Chunghwa Telecom Co., Ltd.

Building deployable and maintainable AI-enabled systems across agent workflows, cloud architecture, automation, and practical web applications.

PROFILE

Engineer focused on turning prototypes into systems that can be deployed, observed, maintained, and improved by real teams. Works across LLM/RAG workflows, AI agents, GCP/Azure services, CI/CD, dashboards, and developer tooling.

SELECTED PROJECTS

ASR-D Personalized Dysarthric Speech Recognition

Personalized ASR and patient analysis workflow combining speech model fine-tuning, historical correction, LLM/RAG post-processing, and review interfaces.

ASR / LLM-RAG / NLP

Chinese Spell Checking and Correction

Chinese NLP workflows including corpus construction, BERT-to-LLM experimentation, error detection, candidate correction, and iterative evaluation.

BERT / LLM / Chinese NLP

AI Agent Applications and Workflows

Agent workflows around LLMs, tool calls, state management, and deployable local/cloud experimentation paths for practical automation.

Agent / Tool Use / Automation

Cloud Architecture and DevOps Optimization

Service-style architecture using GCP, Azure, Cloud Run, App Engine, SQL, Azure DevOps, ACR builds, and CI/CD checks.

GCP / Azure / CI-CD

CURRENT ROLE

Chunghwa Telecom

Research & Development

Turning AI prototypes into deployable and maintainable products and services.

TECHNICAL STACK

CLOUD

GCP, Azure, Cloud Run, App Engine, Managed Identity

AI

LLM, RAG, AI Agent, Prompt Design, Azure AI

BACKEND

Python, Java, REST API, SQL, FastAPI

FRONTEND

React, Vite, HTML, CSS, JavaScript

DEVOPS

Docker, CI/CD, Azure DevOps, ACR

WORKING STYLE

01 Validate first

02 Service-ize next

03 Automate last
